## Research Scenario

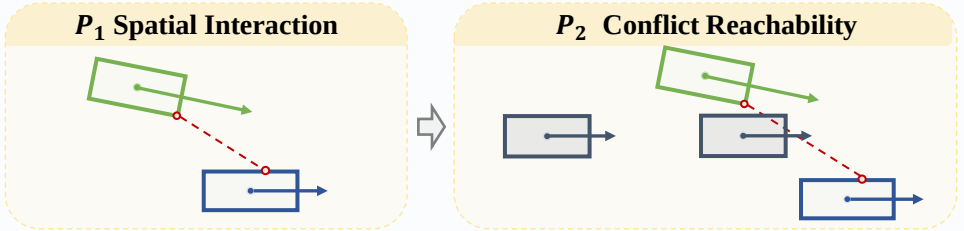

## Stage 1: State Input

## Stage 2:Risk Quantification Framework

### Reachable Conflict Detection

### Constrained Evasion Difficulty Index

**Evasion Constraints**

- Available evasive time
- Static work-zone facilities
- Dynamic multiple surrounding vehicles

**Different Evasive Behavior**

**Mandatory Lane-Changing** | **Vehicle Interaction**

**Minimum Evasion Cost:** $CEDI = \min_{u \in U} C(u)$
